

ABSTRACT OF THE DISCLOSURE

A personalized product producing system enables customers to order a personalized product, such as a name card, a stamp, or a sticker/label, inexpensively and conveniently. Customers operate their own cellular phones to send personalized information to be engraved in a stamp or printed on a name card or sticker/label in the form of e-mail to a host computer. The host computer edits the information and sends personalized product producing data to a stamp personalized product producing device. The personalized product producing device produces a personalized product based on the received data.
